

INDUSTRIAL SAFETY

Moovilys - Mobile application to help you inspect your industrial infrastructures

v2.2.0

The Moovilys platform is a tool that facilitates inspections by automating the production of reports. The platform is divided into two parts:

- a first mobile application on tablets or smartphones for inspection visits
- and a second, for web-based report filing and archiving.

Moovilys is useful for all operators of industrial infrastructures, some of whose activities involve regularly monitoring the condition of assets.

Presentation

GRTgaz Rapport d'inspection de point singulier

Identifiant GMAO : D57630_SIN70011
Désignation de l'ouvrage : BUHL-LORRAINE DP
Numéro OT : 10007359669

Rapport d'inspection de point singulier

- The mobile application can be parameterized and configured to suit the job in hand.
- The smartphone or tablet can interface with a lightweight camera mounted on an articulated pole.
- Reports are generated immediately as the inspection progresses, with photos, descriptions and comments.
- Using 4G or wifi, the report is transferred from the device to the GED server, for a backup that can be consulted 24/7.

Our added value:

Moovilys speeds up the creation of inspection reports.

Moovilys enables inspections to be illustrated in detail with photos taken in the field.

The Moovilys platform can be used to record successive inspections and manage an efficient asset management process.

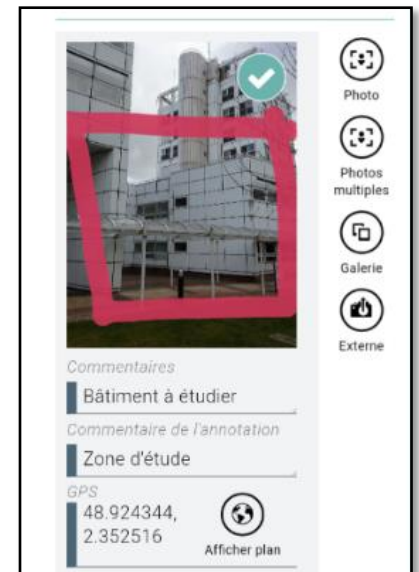

Resources:

- The user is equipped with a telescopic and articulated pole, a camera and a tablet. The Moovilys application is easily installed by the user.
- Inspection reports are hosted in the cloud and can be accessed from anywhere.
- No training is required.

Users and scope of use

- During inspection tours, mobile workers use Moovilys to take photos of structures and infrastructures, and then produce reports automatically.
- Back at the office, the report is accessible in the cloud without any manual modification.
