

Management of your industrial assets and their maintenance

YOUR CHALLENGES

Control the costs, performance and safety of your facilities, thanks to our expertise in system management and optimization.

OUR VALUE-ADDED SKILLS

- Feedback analysis and data science (statistical studies, artificial intelligence, natural language processing, etc.)
- Maintenance optimization (aging models, operational efficiency, predictive maintenance, optimization of maintenance plans and logistics)
- Management of industrial assets (prioritization of investments, OPEX and CAPEX arbitrations, optimization of operations and maintenance, etc.)
- Implementation of tests and experiments (test bench for predictive maintenance, proofs of concept, etc.).

OUR REFERENCES

- Characterization of reliability factors of gas transport equipment, by multifactorial statistical analyses
- Development of predictive maintenance solutions for gas regulators
- Optimization of gas compressor station maintenance plans
- Support for the deployment of new maintenance policies
- Prioritization of investments for the renovation of gas expansion stations according to a cost/performance/safety approach
- Development of a reliability analysis tool using artificial intelligence.
