

Persée+, software for calculating the consequences of dangerous phenomena

YOUR CHALLENGES

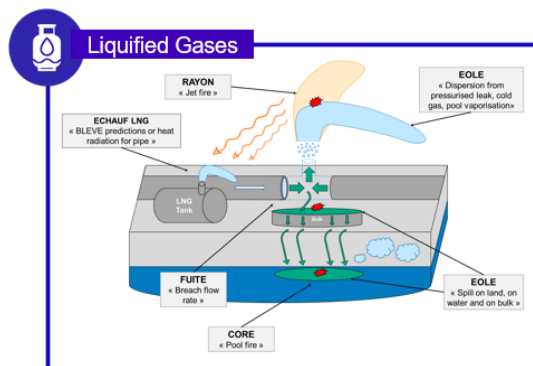

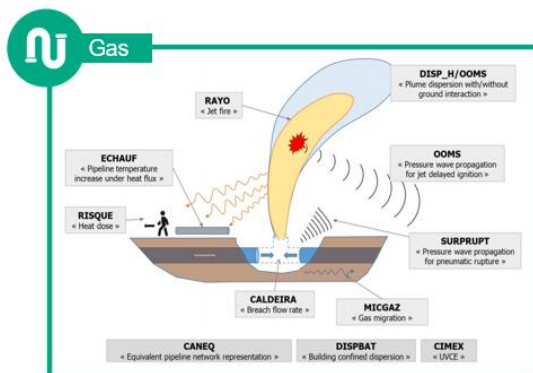

Assess the consequences of hazards related to natural gas, LNG, and new gases such as hydrogen and CO2, to adapt the design, development and maintenance of safe industrial operations.

OUR VALUE-ADDED SKILLS

- Modules based on recognized models (fluid mechanics with conservation of mass, energy and momentum) adapted to the specificities of gas and hydrogen.
- Implementation of physical models validated by numerous experimental campaigns.
- Software validated by third-party expertise (INERIS, DNV and TNO) and recognized by the administration for its good predictive capabilities and its ability to model accident scenarios in the context of regulatory safety studies.
- Regular updates, and a team dedicated to training and maintaining the software.

PRICE OF THE SERVICE

- Annual licenses for the Persée+ Gas (€8,500 excl. VAT/year), Persée+ Liquefied Gases (€6,000 excl. VAT/year), Persée+ Gas & Liquefied Gas modules (€12,000 excl. VAT/year);
- Training in the Persée + Gas module (€4,300 excl. VAT for a number of users of less than 3 people, €7,200 excl. VAT between 4 and 10 people);
- Hotline for all modules (€3,500 excl. VAT/year).
- Contact us to specify your needs.
